Branch: BE -IT

Section/Group:22BET_IOT-703(B)

Semester: 6th

Subject Code: 22ITP-351

PROBLEM-1

AIM:-

Longest Increasing Subsequence

CODE:-

```java
class Solution {
    public int lengthOfLIS(int[] nums) {
        List<Integer> res = new ArrayList<>();

        for (int n : nums) {
            if (res.isEmpty() || res.get(res.size() - 1) < n) {
                res.add(n);
            } else {
                int idx = binarySearch(res, n);
                res.set(idx, n);
            }
        }

        return res.size();
    }

    private int binarySearch(List<Integer> arr, int target) {
        int left = 0;
        int right = arr.size() - 1;

        while (left <= right) {
            int mid = (left + right) / 2;
            if (arr.get(mid) == target) {
                return mid;
            } else if (arr.get(mid) > target) {
                right = mid - 1;
            } else {
                left = mid + 1;
            }
        }

        return left;
    }
}
```
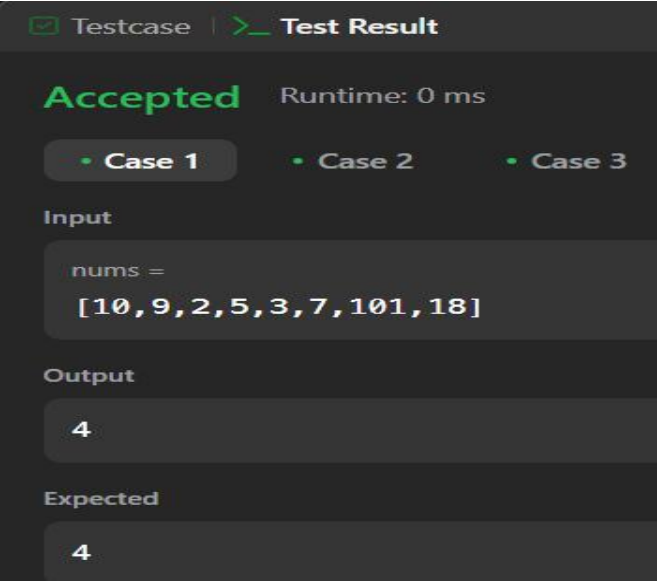

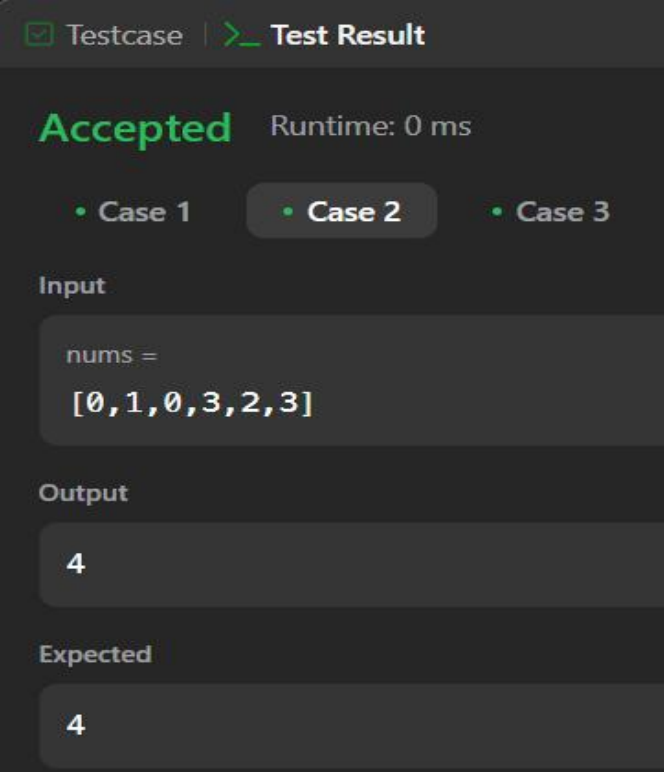

OUTPUT:-

Testcase | >_ Test Result

Accepted Runtime: 0 ms

• Case 1 • Case 2 • Case 3

Input

nums =
[10,9,2,5,3,7,101,18]

Output

4

Expected

4

Testcase | >_ Test Result

Accepted Runtime: 0 ms

• Case 1 • Case 2 • Case 3

Input

nums =
[0,1,0,3,2,3]

Output

4

Expected

4

PROBLEM-2

AIM:-

Maximum Product Subarray

CODE:-
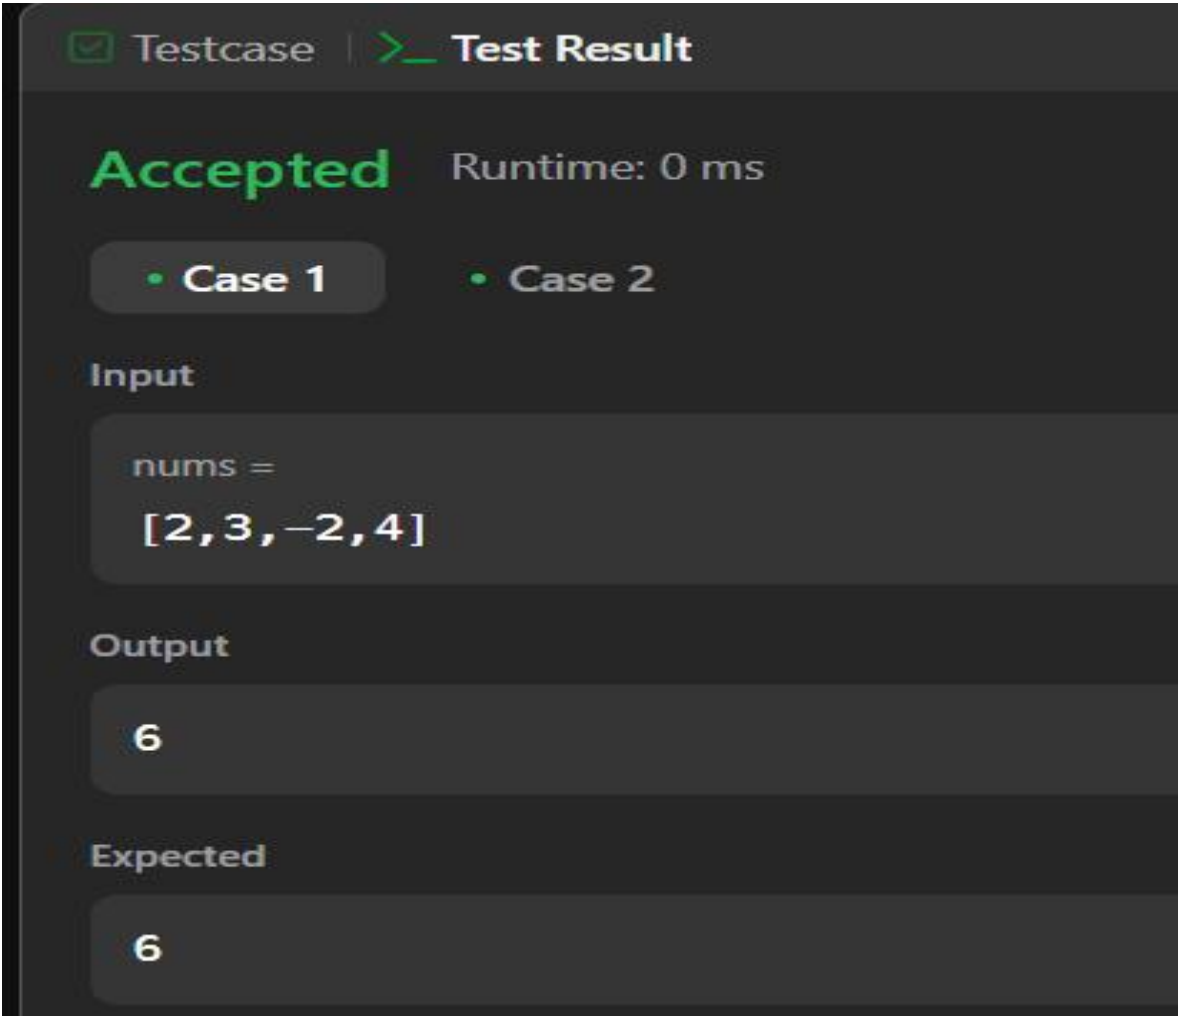

```
class Solution {
    public int maxProduct(int[] nums) {
        int res = Integer.MIN_VALUE;
        for (int n : nums) {
            res = Math.max(res, n);
        }

        int curMax = 1, curMin = 1;

        for (int n : nums) {
            int temp = curMax * n;
            curMax = Math.max(temp, Math.max(curMin * n, n));
```

```
        curMin = Math.min(temp, Math.min(curMin * n, n));

        res = Math.max(res, curMax);
      }

      return res;
    }
  }
```

OUTPUT:-

PROBLEM-3

AIM:-

Decode Ways

CODE:-

```
class Solution {
  public int numDecodings(String s) {
    if (s.charAt(0) == '0') {
      return 0;
    }
  }
```

```java
        int n = s.length();
        int[] dp = new int[n + 1];
        dp[0] = dp[1] = 1;

        for (int i = 2; i <= n; i++) {
            int one = Character.getNumericValue(s.charAt(i - 1));
            int two = Integer.parseInt(s.substring(i - 2, i));

            if (1 <= one && one <= 9) {
                dp[i] += dp[i - 1];
            }
            if (10 <= two && two <= 26) {
                dp[i] += dp[i - 2];
            }
        }

        return dp[n];
    }
}
```
OUTPUT:-

PROBLEM-4

AIM:-

Coin Change

CODE:-

```
class Solution {
    public int coinChange(int[] coins, int amount) {
        int[] minCoins = new int[amount + 1];
        Arrays.fill(minCoins, amount + 1);
        minCoins[0] = 0;

        for (int i = 1; i <= amount; i++) {
            for (int j = 0; j < coins.length; j++) {
                if (i - coins[j] >= 0) {
                    minCoins[i] = Math.min(minCoins[i], 1 + minCoins[i - coins[j]]);
                }
            }
        }

        return minCoins[amount] != amount + 1 ? minCoins[amount] : -1;
    }
}
```

OUTPUT:-

PROBLEM-5

AIM:-

Perfect Squares

CODE:-

```java
public class Solution {
 public boolean searchMatrix(int[][] matrix, int target) {
    if(matrix == null || matrix.length < 1 || matrix[0].length <1) {
       return false;
    }
    int col = matrix[0].length-1;
    int row = 0;
    while(col >= 0 && row <= matrix.length-1) {
       if(target == matrix[row][col]) {
          return true;
       } else if(target < matrix[row][col]) {
          col--;
       } else if(target > matrix[row][col]) {
          row++;
       }
    }
    return false;
 }
}
```

PROBLEM-6

```java
class Solution {

  public boolean wordBreak(String s, List<String> wordDict) {

    return recWay1(s, wordDict);

  }

  boolean recWay2(String s, List<String> wordDict) {

    Boolean[] memo = new Boolean[s.length() + 1];

    return wordBreak2(s, new HashSet<>(wordDict), 0, memo);

  }

  boolean wordBreak2(String s, Set<String> wordDict, int k, Boolean[] memo) {

    int n = s.length();

    if (k == n) return true;

    if (memo[k] != null) return memo[k];

    for (int i=k + 1; i<=n; i++) {

      String word = s.substring(k, i);

      if (wordDict.contains(word) && wordBreak2(s, wordDict, i, memo)) {

        return memo[k] = true;

      }

    }

    return memo[k] = false;

  }

  boolean recWay1(String s, List<String> wordDict) {

    Boolean[] memo = new Boolean[s.length() + 1];

    return wordBreak(s, wordDict, 0, memo);

  }

  boolean wordBreak(String s, List<String> wordDict, int k, Boolean[] memo) {

    if (k == s.length()) {

      return true;

    }
```

```java
      if (memo[k] != null) {
         return memo[k];
      }

      for (int i=0; i<wordDict.size(); i++) {
         String word = wordDict.get(i);
         if (s.startsWith(word, k)) {
            if(wordBreak(s, wordDict, k + word.length(), memo)) return memo[k] = true;
         }
      }

      return memo[k] = false;
   }
}
```

PROBLEM-7

AIM:-

Word Break 2

CODE:-

```java
import java.util.*;

class Solution {
    public List<String> wordBreak(String s, List<String> wordDict) {
        Set<String> wordSet = new HashSet<>(wordDict);
        Map<Integer, List<String>> memo = new HashMap<>();

        return backtrack(s, 0, wordSet, memo);
    }

    private List<String> backtrack(String s, int start, Set<String> wordSet, Map<Integer, List<String>> memo) {
        if (memo.containsKey(start)) {
            return memo.get(start);
        }

        List<String> result = new ArrayList<>();

        if (start == s.length()) {
            result.add("");
            return result;
        }

        for (int end = start + 1; end <= s.length(); end++) {
            String word = s.substring(start, end);

            if (wordSet.contains(word)) {
                List<String> sublist = backtrack(s, end, wordSet, memo);
                for (String sub : sublist) {
                    if (sub.isEmpty()) {
                        result.add(word);
                    } else {
                        result.add(word + " " + sub);
                    }
                }
            }
        }
```

```
        }
            memo.put(start, result);
        return result;
    }
}
```
